

### **Recommended maximum tolerable doses**

Lead Select PO is designed for checking the relative oral bioavailability of your compound in single dosing studies- it is not intended for chronic dosing or for tox evaluation.

For **mice** , it is recommended NOT to exceed a volume of **10 mL** / kg per mouse orally administered once a day (after dilution of step 3). i.e. for a 20 g mouse the volume should not exceed **200 mL** (microlitres) once a day.

For **rats**, it is recommended NOT to exceed a volume of **7.5 mL** / kg per rat orally administered once a day (after dilution of step 3). i.e. for a 250 g rat the volume should not exceed **1.85 mL** once a day.

The dosing limitations are related to the organic solvents contained in the dosing vehicle, which are required to make it easy to use for a variety of compounds.
